Brilliant Fikri

IT Developer | Problem Solver | Bridging Between Business Needs
and Technical Solutions

Surabaya, East Java, Indonesia

Summary

Hi! I'm Liant - a software developer who is transitioning into a realm that focuses more on business development, product strategy, and human interaction. Over the past few years, I've built full-stack web and mobile systems, including real-world projects like HRIS and API development that support direct business needs. However, over time, I realized that my biggest interest is not just in how technology works - but how it solves human problems and drives business growth. My background in software development and networking gave me the ability to think systematically and technically. Now, I want to bring that ability to a more strategic context: bridging technical teams with users, exploring markets, and driving solutions that are tangibly relevant. I am currently open for opportunities in the areas of : Business Development (especially in tech/startups), Product Engineering, Full Stack Developer. Feel free to connect or discuss - I'm always happy to chat about ideas, products, and potential collaborations.

Experience

SummaEdu

Information Technology Developer

July 2025 - Present (1 year)

Surabaya, Jawa Timur, Indonesia

- Full-Stack Development: Engineered and maintained the core School Information System (SIS), focusing on stability and feature scalability using CodeIgniter, Laravel, MySQL, etc.
- Infrastructure & Support: Managed school-wide network infrastructure and resolved technical bottlenecks to ensure zero downtime during operational hours.
- Technical Education: Designed coding curriculum and mentored students, fostering a practical understanding of software development lifecycles.

Sekolah Programming Indonesia
Programming Instructor
January 2025 - July 2025 (7 months)
Surabaya, Jawa Timur, Indonesia

- Facilitated logic and block-based coding workshops for K-12 students, emphasizing problem-solving mindsets over rote memorization.
- Developed a collaborative learning environment (Student-Centered Learning) allowing students to build real-world micro-projects.
- Conducted periodic assessments to personalize teaching strategies for different learning paces.

Peduly
Back End Developer
March 2025 - June 2025 (4 months)
Surabaya, Jawa Timur, Indonesia

- API Architecture: Designed and deployed secure RESTful APIs, optimizing database interactions to eliminate N+1 query issues.
- System Scalability: Refactored legacy code to improve maintainability and implemented documentation standards (OpenAPI/Swagger) for seamless developer handover.

Universitas Telkom
Practicum Assistant
January 2024 - June 2024 (6 months)
Surabaya, Jawa Timur, Indonesia

- Technical Mentorship: Mentored undergraduate students in mastering MVC Framework concepts and Network Topologies, bridging the gap between theoretical logic and practical implementation.
- Curriculum Development: Revitalized course modules to align with modern industry standards, ensuring students practiced on relevant tech stacks rather than outdated legacy systems.
- Team Collaboration: Coordinated with the teaching team to standardize lab procedures, ensuring consistent learning delivery across multiple classes.

- Objective Assessment: Conducted rigorous code reviews and exams, maintaining high academic integrity and providing constructive feedback on code quality.

INDO GLOBAL IMPEX PRIVATE LIMITED

Full-Stack Website Developer

January 2024 - June 2024 (6 months)

Surabaya, Jawa Timur, Indonesia

- Built an end-to-end HRIS featuring complex Role-Based Access Control (RBAC) and automated payroll calculation modules.
- Integrated attendance machine data with the salary engine to automate slip generation, reducing manual processing time significantly.
- Translated complex business requirements into a functional web architecture ensuring data integrity for employee records.

Kejaksaan Tinggi Jawa Timur

Full-Stack Website Developer

August 2023 - September 2023 (2 months)

Surabaya, Jawa Timur, Indonesia

- Stakeholder Management: Acted as a technical liaison between the institution's requirements and the development team, translating high-level organizational needs into actionable technical specifications.
- System Architecture: Engineered a centralized Echelon Management System for multiple work units under Kejaksaan Tinggi Jawa Timur, streamlining hierarchical data administration.
- GIS Integration: Developed an interactive Geographical Information System (GIS) module to visualize personnel distribution and regional work unit data, providing executive-level insights for better resource allocation.
- Workflow Optimization: Modernized legacy manual record-keeping into a digital ecosystem, significantly reducing data handling latency and improving overall development lifecycle efficiency.

Lintasarta

Full-Stack Website Developer

June 2019 - August 2019 (3 months)

Surabaya, Jawa Timur, Indonesia

- Cross-Functional Coordination: Served as a technical liaison between company representatives and the intern development team, ensuring alignment between business requirements and technical execution.
- Database Engineering: Designed and developed a centralized network data management system for the Network Engineer Division, optimizing the storage and retrieval of critical customer infrastructure data.
- System Sustainability: Implemented clean architecture principles and maintainable code practices to ensure the long-term scalability and viability of the internal web application.
- Operational Efficiency: Drastically improved data accessibility for engineers, replacing fragmented documentation with a structured system to reduce information retrieval latency.

Education

Universitas Telkom

Gelar Sarjana, Information Systems · (2020 - 2024)

SMK Telkom Malang

Student, Computer Network Engineering · (2017 - 2020)
